Nigeria Livestock Development Programme (NLDP)

Nigeria Livestock Development Programme (NLDP) The Nigeria Livestock Development Project (NLDP), conceived by Nestlé Nigeria, seeks to develop more than 1000 hectares of grazing area to demonstrate how the establishment of improved pasture can increase productivity of indigenous cattle and contribute to the professionalization of settled Fulanis as dairy farmers.

Key Project Objectives

- To promote the Fulani Dairy cooperative model
- To foster better quality milk production and supply
- To avail access to better fodder and feed
- To foster partnership progress and performance monitoring of project outcomes

Nigeria Livestock Development Programme (NLDP)

Key project achievement

- In 2021, the project successfully onboarded 2 off-takers that regularly purchase 300-500 litres of fresh milk per day.
- The project successfully negotiated N200.00/litre as unit cost for purchasing milk from Fulani Milk Producers (FMPs).
- Strengthened partnerships through increased reporting and physical engagements with government partners – Kaduna State Government and Federal Capital Territory Authority (FCTA).

Significant Project Challenges

- Cattle diseases outbreak
- Incidence of Insecurity
- Herd migration due to poor feed and water

Grazing Reserve, Kaduna State

The Nigeria Livestock Development Project (NLDP), conceived by Nestlé Nigeria, seeks to develop more than 1000 hectares of grazing area to demonstrate how the establishment of improved pasture can increase productivity of indigenous cattle and contribute to the professionalization of settled Fulanis as dairy farmers. The selected location for the implementation of the NLDP is the Paikon Kore Grazing Reserve in the Federal Capital Territory (FCT), owned by the FGN. The partnership brings together a set of value chain stakeholders with the collective capacity to deepen and accelerate an inclusive business model in dairy, with the FGN allocating 1,000ha to Nestlé's as its support to the programme.

The team took the opportunity presented by a training planned by Câm dairies for 50 participants and scaled it up to reach over 300, of which more than 50% of the beneficiaries were women. The training, which took place in December 2020, was designed to strengthen the capacity of beneficiaries to understand feeds and feeding, herd health management, milk handling and hygiene, as well as cooperatives formation and dynamics. The first two trainings were intended to help the pastoralists to increase milk production from their animals, improve milk handling, and improve understanding of quality of milk expected.

Project Pillars

Project Pillars

Key Project Stakeholders and Partners

Nestle Nigeria is one of the largest food and beverage companies in Africa. Through the NLDP, the company plans to support the dairy policies set by the FGN by investing in the development of dairy value chains that benefits smallholder farmers, pastoralists and local dairy businesses.

CBi Innovations Limited (CBiIL) is an agritech company that supports smallholder farmers at scale to deliver the productivity and traceability of produce sought by processors, aided by technology to minimize impact on economics of production. CBiIL is directly responsible for the dairy project implementation, including the setup and management of Nestle's Demonstration Farm.

2SCALE (a programme under the International Fertiliser Development Centre (IFDC)) is one of the largest incubators for inclusive agribusiness in Africa. On the NLDP, 2SCALE is supporting Nestle by delivering farm level capacity building, cooperative development and development of supply chain connected to smallholder farmers.
